Editorial

Our Smart Cities Marketplace July newsletter always makes us wonder about summer holidays.

But the flash floods have taken our breath away – from Switzerland to Germany, Belgium to the Netherlands, people have lost their homes, and some even their neighbours. They have been confronted with a force of nature that has been previously unknown to these parts of the world – so talking about summer holidays seems a bid trivial now.

Entire streets were devastated in the village of Hohenlimburg, Germany. The fire brigade evacuated people from their homes in South Limburg, the Netherlands. The Reuss River in Lucerne, Switzerland, broke its banks and floods in particular in the spa town of Spa (Belgium) lead to the evacuation of hundreds of inhabitants.

To close the circle one of the major tasks of the Smart Cities Movement is to consider adaptation to climate change as a key element of urban planning as well as urban reconstruction. Adaptation to floods as well as heat (Greetings from Canada & California) need to become part of a Smart City's DNA – to enable its citizens to have a safe and prosperous life.
